```

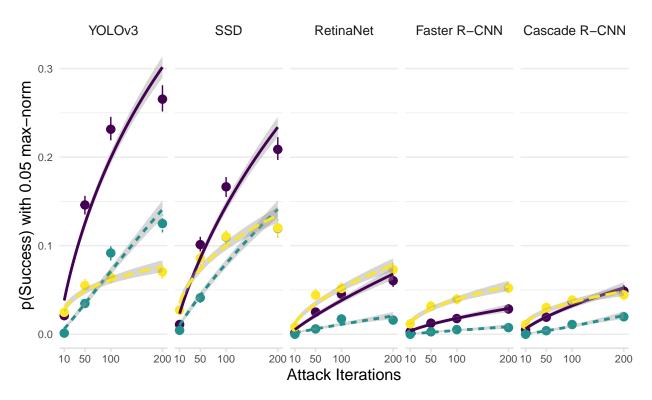

Figure 1: Intent obfuscating attack is feasible for all models and attacks even with 0.05 max-norm: We conduct a randomized experiment by resampling COCO images, and within those images randomly sampling correctly predicted target and perturb objects. Then we distort the perturb objects to disrupt the target objects varying the attack iterations. The binned summaries and regression trendlines graph success proportion against attack iterations in the randomized attack experiment. Errors are 95% confidence intervals and every point aggregates success over 4,000 images. Targeted vanishing and mislabeling attacks obtain significantly greater success on the 1-stage YOLOv3 and SSD than the 2-stage Faster R-CNN and Cascade R-CNN detectors. However, the 1-stage RetinaNet is as resilient as the 2-stage detectors. Moreover, success rates significantly increase with larger attack iterations. Significance is determined at $\alpha < 0.05$ using a Wald z-test on the logistic estimates. Full details are given in Section ??.

cap <- table_caption("detection models, split by attack,", "Both vanishing and mislabeling attacks obta
print_statistics(reg_est, cap)
```

Table 1: We run a logistic model regressing success against detection models, split by attack, in the randomized attack experiment. Both vanishing and mislabeling attacks obtain higher success on 1-stage (YOLOv3, SSD) than 2-stage (Faster R-CNN, Cascade R-CNN) detectors. However, the 1-stage RetinaNet is as resilient as 2-stage detectors. Table headers are explained in Appendix ??.

```

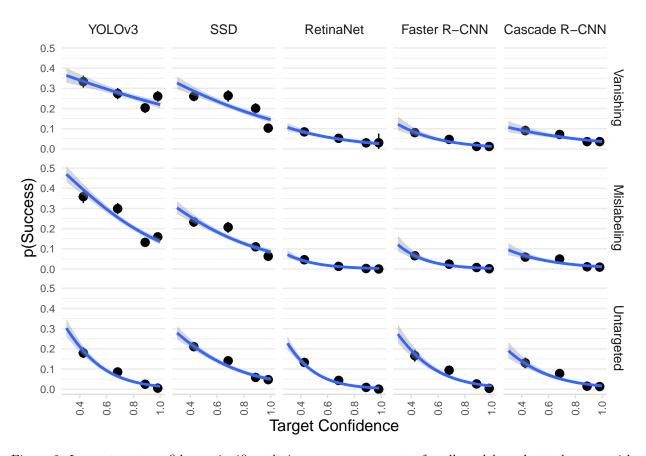

Figure 2: Lower target confidence significantly increases success rates for all models and attacks even with 0.05 max-norm: The binned summaries and regression trendlines graph success proportion against target confidence in the randomized attack experiment. Bins are split into quantiles. Errors are 95% confidence intervals

## Warning: There were 4 warnings in `mutate()`.
## The first warning was:
## i In argument: `mod = list(model(data))`.
## i In row 7.
## Caused by warning:
## ! glm.fit: fitted probabilities numerically 0 or 1 occurred
## i Run `dplyr::last_dplyr_warnings()` to see the 3 remaining warnings.
## Warning: There were 168 warnings in `summarize()`.
## The first warning was:
## i In argument: `tidy_plus_plus(mod, conf.int = TRUE)`.
## i In row 7.
## Caused by warning:
## ! glm.fit: fitted probabilities numerically 0 or 1 occurred
## i Run `dplyr::last_dplyr_warnings()` to see the 167 remaining warnings.
## Warning: Returning more (or less) than 1 row per `summarise()` group was deprecated in
## dplyr 1.1.0.
## i Please use `reframe()` instead.
## i When switching from `summarise()` to `reframe()`, remember that `reframe()`
## always returns an ungrouped data frame and adjust accordingly.
## Call `lifecycle::last_lifecycle_warnings()` to see where this warning was
## generated.
## `summarise()` has grouped output by 'model_name', 'loss_target'. You can
## override using the `.groups` argument.
```

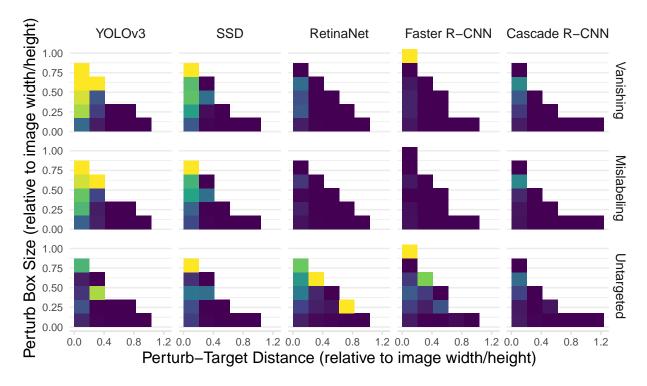

Figure 3: Larger perturb objects significantly increase success rates for all models and attacks, except for mislabeling attack on Faster R-CNN, after controlling for perturb-target distances. Shorter perturb-target distances significantly increase success rates for all models and attacks, after controlling for perturb object sizes even with 0.05 max-norm: The binned summaries graph success proportion against perturb-target distance (relative to image width/height) and perturb box size (relative to image width/height) in the randomized attack experiment.

```

Table 5: We run a logistic model regressing success against perturb-target distance (relative to image width/height) and perturb box size (relative to image width/height) in the randomized attack experiment. Larger perturb objects significantly increase success rates for all models and attacks, except for mislabeling attack on Faster R-CNN, after controlling for perturb-target distances. Shorter perturb-target distances significantly increase success rates for all models and attacks, after controlling for perturb object sizes. Table headers are explained in Appendix ??.

## Warning: Returning more (or less) than 1 row per `summarise()` group was deprecated in
## dplyr 1.1.0.
## i Please use `reframe()` instead.
## i When switching from `summarise()` to `reframe()`, remember that `reframe()`
     always returns an ungrouped data frame and adjust accordingly.
## Call `lifecycle::last_lifecycle_warnings()` to see where this warning was
## generated.
## `summarise()` has grouped output by 'model_name', 'loss_target'. You can
## override using the `.groups` argument.
# there are both significantly positive and negative qt_p_success,
# and the interaction term is relatively large
ext_sig(reg_est, "neg", "gt_p_success")
```

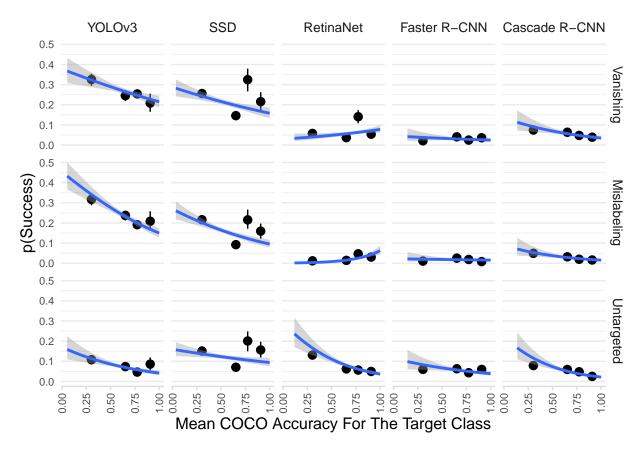

Figure 4: Although higher mean COCO accuracy for the target class seem to decrease success rates, the results are mixed after controlling for target class confidence (Table 6) even with 0.05 max-norm: The binned summaries and regression trendlines graph success proportion against mean COCO accuracy for the target class in the randomized attack experiment. Bins are split into quantiles. Errors are 95% confidence intervals

  glue("{main_pt} and the relatively large interaction terms make interpretation challenging")
))
```

Table 6: We run a logistic model regressing success against mean COCO accuracy for the target class, with target confidence as covariate, in the randomized attack experiment. The results are mixed after controlling for target class confidence and the relatively large interaction terms make interpretation challenging. Table headers are explained in Appendix ??.

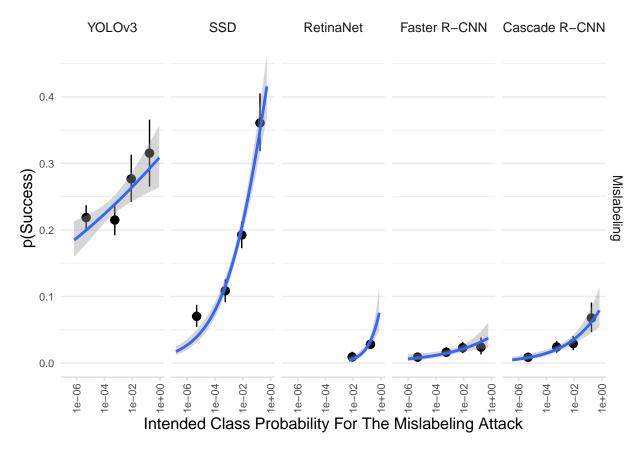

Figure 5: Although intended class probability seem to increase success rates for the mislabeling attack, it does not predict success rates after controlling for target class confidence, except for RetinaNet (Table 7) even with 0.05 max-norm: The binned summaries and regression trendlines graph success proportion against intended class probability in the randomized attack experiment. Bins are split into quantiles. Errors are 95% confidence intervals
